

Top ups

Please ensure you have booked your next top up within 4—8 weeks of the first treatment, this is included in the treatment cost. If the top up isn't carried out within this time there will be an additional charge of £60.

Your procedure may need additional tops up to ensure perfect pigmentation (some skin types, medications & general healing of some Clients), I will happily carry out one free of charge to perfect your brows (maximum 30 minutes work). It is your responsibility to book this appointment. If any further top ups are required it is an additional cost of £40.

These appointments must be undertaken no more than 8 weeks after the last treatment or the colour boost charges below will apply.

Colour Boosts

Each individual's colour retention within the skin will vary, colour boost top ups maintain the Microblading at the following costs:

Within 6 months £60

Within 6 months to 1 year £100

Within 1 year to 18 months £150

After 18 months full treatment cost (£250)

If you have any queries about your procedure or aftercare then please don't hesitate to contact me on 07792 931229.

Microblading After Care

Microblading Aftercare

- The brows will be slightly red after the procedure and the colour will appear 40%-50% darker and crisper.
- This will begin to fade over 7-10 days, as the brows heal you will experience some scabbing, flaking, dryness, and itching as the healing process takes place.
- Do not pick at the scabs and this may damage the skin and the outcome of the treatment.
- The brows will lighten up in colour as they heal, the true colour will not come through until up to 4 weeks after the initial treatment.
- You may notice the pigment may seem to have disappeared, look very light or patchy and have an opaque milky appearance about 2 weeks after the procedure, this is known as the milk skin and is very common in tattooing, this tissue is still healing from the inside so the pigment is obscured by the continuing healing process.
- The top up cannot be undertaken before 4 weeks, most importantly this is to prevent scar damage as the tissue requires time to heal. The top up must be completed within 6-8 weeks for optimum results as everyone heals differently and the outcome will vary, certain areas may not pick up the colour as the body naturally rejects it as a foreign object. At the top up we can adjust the pigment colour, (oily skins often require a deeper shade during the touch up as the oils tend to lighten the pigment). Most importantly your touch up is when we refine your brows to ensure they look perfect!

Starting from the night of the treatment and for the next 7-10 days (or until brows have visibly healed):

- Pat the brows gently with a damp cotton pad, do this every morning and night (before you reapply the healing balm), being careful not to remove any scabs/ dryness when they start appearing
- Apply a light layer of the healing balm to the brows with clean hands or a cotton bud, do this morning and night (do not over apply)
- Do not get the brows wet, if they do get wet pat dry very gently with a clean towel or tissue. Use healing balm prior to showering to protect the brows, cover with film if necessary
- Ensure hair and fringes are not touching the brow area
- Do not use any creams, scrubs, make up, removers or products on the brows, they can be used on the rest of the face but avoiding the brow area
- Do not expose the area to extreme heat or cold (sunbeds, saunas, steams, sunbathing) and avoid excessively sweaty gym sessions
- Do not touch, pick, scratch or rub the brows

General Post Procedure Info

- To avoid pigment fading avoid excessive exposure to the sun or UV rays and use an SPF30
- You should not give blood for 6 months following the procedure
- If you are planning an MRI scan, chemical peel or any other similar procedures please inform your practitioner or Doctor that you have had semi permanent cosmetics
- Botox and collagen can alter the shape of eyebrows so consider this for future treatments. Please complete the two microblading sessions fully and allow the brows to heal before having these treatments.
- To ensure your brows last do not use fake tan, AHA or Glycolic Acid on the brows as the skins
